### Your homework

• Watch related conference talks

### Your homework

- Watch more conference talks
- Clone some projects

#### Sessionize/Droidcon Mobile Clients

This project has a pair of native mobile applications backed by the Sessionize data api for use in events hosted by the Sessionize web application. These are specifically for Droidcon events, but can be forked and customized for anything run on Sessionize.

#### Kotlin 1.3.21 Updates!!

With the release of Kotlin 1.3.20, the Jetbrains standard libraries support Gradle 4.10.2+. Now all libraries used in this app are their standard supported versions, and the app can be developed with Android Studio as well as Intellij.

#### Libraries

Kotlin multiplatform libraries used:

- SQLDelight SQL model generator from Square and AlecStrong.
- SQLiter Lightly opinionated sqlite access driver. Powering the sqldelight native driver.
- multiplatform-settings Shared settings for Android and iOS from russhwolf.
- kotliny corialization

#### Client/Server networking

#### **Kotlinx.Coroutines**

Support library for coroutines. Native are single-threaded only, so kind of a waiting situation.

#### **Kotlinx.Serialization**

Kotlin cross-platform / multi-format reflectionless serialization

#### SqlDelight

Multiplatform SQLite model facilitation library.

#### **SQLiter**

Lightly opinionated Sqlite access driver.
